FEATURE

From pilots to production: responsible AI gets practical

Four lessons from teams moving AI into regulated workflows without compromising control.

The quarter in 60 seconds

Field	Value
Eligible workflows with AI-assisted step	41%
Strategic wins	17
Fewer P1/P2 incidents	28%
Release lead time	3 days
Client retention	95%+

What we learned about production AI

Field	Value
Start with workflow friction	Tie use cases to clear operational pain.
Design the control before the demo	Define human override, audit evidence and failure handling early.
Measure changed work	Use cycle time, error rate and manual touch points.
Make adoption visible	Use telemetry and team feedback to distinguish productivity from experimentation.

Client story

A regional markets client consolidated fragmented confirmation workflows into a single observable process.

People

The production support and SRE teams reduced material incidents while release frequency increased.
